SERVERTRAX v1.30

North American Credit & Debit Tableside Transaction Processing System for Restaurants

DataTrax Technologies Inc. (DTI) launched the first tip tracking software for MagIC 9000 credit/debit terminals in 2 major Canadian cities earlier this year. We are pleased to report that this 2001 software release supported by certified & encrypted banking terminals has gained immediate and overwhelming acceptance. As always, our focus has been & continues to be to provide you with the most comprehensive & up to date Sales Analysis and Reporting tools in the food & beverage industry.

Since 1997, DTI has been providing customer based solutions on the Schlumberger MagIC 9000 platform. A track record of reliability beyond industry standards has led to the adoption of the MagIC 9000 as the terminal of choice in both the Wired (Short Range) & Wireless (Long Range) Credit/Debit terminal markets for Moneris Solutions. (a joint investment between Royal Bank & Bank of Montreal). DataTrax Technologies is an ACC/PAC development Partner.

DataTrax Milestones

- 1997 – beta testing & certification of e-ticketing software and MagIC 9000 hardware
- 1998 – delivered first electronic ticket to the public and merchant transaction to Royal Bank
- 1999 – delivered first wireless MagIC 9000 transaction in Canada (to the Royal Bank)
- 2000 – active customer list has grown to 500 vendors & suppliers
- 2001 – spring launch of North America's first wireless Point of Sale systems.

datatraxtechnologies.com

- ✍ Wired (known as tableside) terminals can be operated anywhere you find access to a phone line.
- ✍ RF (known as short range) terminals operate like a portable home phone and can be operated within 100 metres of a base station modem for real-time transaction processing or at any remote location when off-line transaction processing is acceptable.
- ✍ Wireless (known as long range) terminals are supported over the Rogers Mobitex network.
